

2D for PDA

Laser Profiling Software

This software can be used with many lasers currently on the market.

Profiles can be viewed and printed directly from the PDA via infrared or Bluetooth® technology.

The software allows the operator to modify many blast design parameters including, but not limited to:

- HOLE ANGLE
- HOLE DEPTH
- STEMMING HEIGHT
- SUBDRILL
- BURDEN REQUIREMENTS

This software has been adopted by explosive companies, mining companies and quarries. The cost of the software is extremely affordable.
